

Radheshyam Bhati

Jodhpur, Rajasthan

+91 78781 37465 | radheshyambhati747@gmail.com

Summary

Driven BTech Computer Science student with hands-on experience building AI-powered security and fintech solutions. Built two production-ready prototypes in national-level hackathons. Strong foundation in full-stack development, AI/ML integration, and cybersecurity fundamentals. Fast learner with proven ability to translate complex ideas into working applications.

Education

B.Tech – Computer Science & Engineering

PW Institute of Innovation (PW IOI) | 2025–Present

Projects & Hackathons

Hack4Safety Cybersecurity Hackathon – NIT Rourkela (2025)

ScamShield – AI-Powered Scam Detection System

Developed a next-generation mobile security solution addressing fraud detection with advanced tech stack.

- Implemented federated learning for privacy-preserving model training and blockchain evidence logging for immutable incident records
- Built real-time scam detection, deepfake voice/video alerts, UPI freeze capability, and automated FIR filing workflow
- Designed Odisha-specific features: regional alert system, police-integrated dashboard, and citizen-friendly reporting interface
- Tech stack: Flutter, TensorFlow, Node.js, PostgreSQL, Ethereum/Polygon, IPFS, AES-256 encryption, JWT, Firebase

Impact: Prototype ready for law enforcement integration; addresses rural cybercrime gap in India.

Mumbai Hacks – FinMate (2025)

FinMate – AI Personal Finance Coach

Built an intelligent financial coaching application targeting students, freelancers, and early-stage earners with irregular income.

- Designed AI agent workflows that analyze spending patterns and generate personalized budgets, spending alerts, and weekly financial insights
- Implemented goal planning, behavioral spending analysis, proactive budget alerts, and automated monthly financial reports
- Addressed real pain points: irregular income management, impulse spending, poor saving habits, and financial literacy gaps
- Tech stack: Python (Flask/FastAPI), OpenAI models, React frontend, Firebase authentication and data storage

Impact: Validated with target users; ready for beta testing and fintech partnership.

Technical Skills

Programming Languages

Python, C/C++

AI & Machine Learning

TensorFlow, Federated Learning, Prompt Engineering, AI Agent Design, Large Language Models

Web & Mobile Development

Flutter, React, Node.js, FastAPI, Firebase

Databases & Infrastructure

PostgreSQL, IPFS, Ethereum/Polygon, Firebase

Data & Visualization

Power BI (dashboards, reporting), data analysis fundamentals

Cybersecurity

AES-256 encryption, JWT authentication, blockchain-based logging, zero-trust architecture, penetration testing basics

Tools & Design

Presentation design, flowchart/system architecture diagrams, technical documentation, event coordination

Certifications & Training

- **AI Prompt Engineering Masterclass** – Reliance Digital
 - **Cybersecurity Job Simulation** – Completion Certificate
 - **Power BI Workshop** – Office Master
-

Key Achievements

- **National Hackathon Participation:** Competed in top-tier hackathons (Hack4Safety at NIT Rourkela, Mumbai Hacks) against strong technical competition
- **Rapid Prototyping:** Delivered two fully functional prototypes with real-world applicability in cybersecurity and fintech domains
- **Full-Stack Execution:** Owned entire product development cycle from concept through deployment—backend architecture, AI integration, mobile/web frontend,

and user experience

- **Cross-Functional Problem-Solving:** Translated complex security and financial challenges into user-centric solutions; identified and solved domain-specific pain points
- **Technical Communication:** Created polished technical decks and documentation that bridge technical depth with business clarity

Why You Should Hire Me

I'm not just collecting projects—I build things people actually need. ScamShield addresses a genuine security gap in rural India. FinMate tackles real financial anxiety among early earners. Both are live prototypes, not coursework.

I learn fast, work independently, and genuinely care about making things work. I'm comfortable operating in ambiguity, breaking down hard problems, and iterating quickly. I've proven I can manage full-stack complexity while keeping user needs at the center.
